

Re-Lux LED was born when our founder, Jeff Silverman, a veteran of lighting design and build projects, including entertainment and architecture, became concerned that no affordable and effective LED lighting products were available in the consumer market. We knew the technology was significantly advanced and began a process of trials and testing on the leading designs. Then in 2008 after several years working with the LED technology in entertainment, we found the right product mix to offer others interested in reducing their energy use and making a modest investment for the future and sustainable living.

ReLux LED offers a wonderful synergy for anyone interested in a more eco-friendly lifestyle, and certainly those investing in solar and other renewable energy due to immediate beneficial impact on electrical usage. Our LED bulbs save up to 80% of energy otherwise used by conventional bulbs. That equates to 10.00 per year per bulb rated 10 watts (replaces up to 60 watt incandescent and 18 watt CF bulb). Multiply the savings for many years, as the long service life indicates that between reduced energy and reduced bulb replacements, your investment will pay for itself in as little as 3 years and will pay for itself many times over during its service life (up to 600% return on your money).

Re-Lux LED advantages include:

- extremely long service life (20+ years) making these products a permanent feature of a home and thereby considered an asset and investment, not just a green energy movement
- Rohs compliance, unlike CF lamps ReLux LED bulbs are not made with toxic hazardous materials
- unlike conventional lamps, LED's provide same lumens at 80% or greater reduction in energy use While being twice as efficient as CF bulbs
- our LED products are available in both warm and cool color temperatures, meaning we can place them where they provide the right kind of light for any task in the home or office.
- ReLux LED bulbs are screw-in Edison type as well as low voltage replacements for MR series fixtures. This means our products can be used by anyone, making this a DIY (do-it-yourself) product
- Our price points are below current market, including web offers for product with lesser output. We accomplish this through timely research ahead of the market and via volume purchasing, allowing us to reduce importation costs, so we can pass the savings on to our customers
- great re-seller programs are available, Inquire with Management
